Summary

Data analyst with hands-on experience building end-to-end analytics pipelines — from ETL and star schema design to interactive dashboards and time-series forecasting. Projects span FMCG procurement intelligence, pharmacy retail operations, and e-commerce marketing analytics. Strong foundation in Python, SQL, and business-oriented storytelling; background in UX design sharpens how I communicate findings to non-technical stakeholders.

Education

Universitas Terbuka, Bachelor in Management	Jan 2022 – Jan 2026
Pacmann, Program in Analytics & Data Science	Jan 2023 – Jan 2025
Bangkit Academy (Google, Tokopedia, Gojek, Traveloka), Independent Study in Cloud Computing	Jan 2024 – Jan 2024

Experience

UX Designer, PT Kautsar Inovasi Teknologi Digital	Jan 2020 – Jan 2021
- Designed user interfaces for school and learning management system products, translating user requirements into component specifications - Collaborated with developers to establish a shared design system, reducing implementation inconsistency across product lines	

Projects

Indonesia Food Price Intelligence ↗	In Progress
Built a procurement intelligence tool for FMCG Category Managers sourcing rice, cooking oil, sugar, and flour across Indonesia. Analyzed 17 years of WFP price data across 224 markets to map seasonal spikes (Ramadan premium on sugar, Q2 harvest discount on rice), a 30% persistent price gap between Eastern Indonesia and Java for cooking oil, and a 3-month leading relationship between oil and flour prices. Includes a 6-month price forecast with explicit confidence intervals to guide procurement timing decisions.	
Pharmacy Retail Sales Analytics ↗	May 18 – May 26, 2026
Analyzed a hospital pharmacy’s full-year sales data to surface margin risk and inform 2016 procurement decisions. Identified 2 branded SKUs selling below cost and mapped revenue concentration patterns across inpatient and outpatient channels. Delivered a 3-page interactive dashboard — with a margin threshold slider and CSV export — for the Pharmacy Director and Finance team to act on product pricing and procurement priorities.	
Olist Marketing Funnel: Channel Performance & LTV Analysis ↗	May 8 – May 18, 2026
Investigated why Social — Olist’s second-highest-volume acquisition channel — converted at only half the rate of Paid and Organic Search. Found the root cause in channel deal composition: Social’s closed deals skewed nearly twice as heavy in high-maintenance seller profiles compared to other channels, a structural drag on conversion rather than a lead quality issue. Delivered a 4-page Power BI dashboard with channel LTV and funnel analysis to support VP Marketing budget allocation for Q3 2018.	

Skills

Languages: Python, SQL, TypeScript

Data Stack: PostgreSQL, DuckDB, dbt, pandas, ETL Pipeline Design, Star Schema Modeling

Analysis & Forecasting: Exploratory Data Analysis, Time-Series Analysis, Forecasting (AutoARIMA, AutoETS), Funnel Analysis, LTV Analysis

Visualization: Power BI, Recharts, Marimo

Infrastructure & Tools: Next.js, TypeScript, Cloudflare Pages, GitHub Actions, AI-Assisted Development
